

Josh Wolfe.

AI-Native Full-Stack Engineer — ships production systems at **team scale, solo**

KATY, TX • HOUSTON / 832-389-1266 / JOSH@JOSH-WOLFE.COM / JOSH-WOLFE.COM / REMOTE-FIRST • 50% TRAVEL OK

SUMMARY

Senior engineer targeting **Forward Deployed Engineer** and **AI Solutions Architect** roles — 12+ years owning customer-facing systems from **discovery through deployment and adoption**. The person leadership pulls in when a production platform must be de-risked, rebuilt, or rescued; equally effective embedded with customers and paired with internal teams. Product-minded, MBA, and a track record of embedded delivery for Bay Area companies, with \$1.5M in add-on software sold on-site.

FORWARD-DEPLOYED PATTERN

Customer discovery • Technical scoping • Solution design • On-site deployment • Production rescue & debugging • Internal + external stakeholder management — AI agents & agentic delivery • RAG & embeddings • MCP • AWS / EKS / Kubernetes • CI/CD automation • API integrations

HOW I BUILD

Claude is my primary development engine inside a disciplined delivery method: structured planning with JIRA-linked acceptance criteria, adversarial plan review before building, layered automated review (Claude + Copilot) ahead of human peer review, and OpenSpec to keep agents aligned on large scopes. The method carried **100K+ authored lines across three concurrent production systems this year, solo** — with test-backed deployments and TypeScript / lint errors held at zero.

ENTERPRISE EXPERIENCE

Senior Full-Stack Engineer / Tech Lead

SERVICEMAX (PTC) • REMOTE • 05/2021 – PRESENT • ZINC – ENTERPRISE COMMS FOR FIELD SERVICE

Zinc Support Console

Solo • shipped in weeks

- Sole architect and engineer, start to finish, of the system ServiceMax uses to create and manage **every Zinc tenant** — replaced manual SQL work and Rails-console hot-fixes on live production data with a role-gated GUI on global search indices that cut multi-day investigations.
- Greenfield Rails API, React 19 / TypeScript front end, full Jenkins CI/CD — **shipped through security review and delivery pipelines in a couple of weeks of focused effort**; adopted by **six org functions in four countries** and now growing into a knowledge base for support, executives, sales, and engineering.

Zinc Admin Dashboard Rewrite

~87K lines • solo

- Single-handedly rebuilt the application **every ServiceMax customer** uses to manage their tenant, migrating a legacy Ember stack that had become a **critical security liability** onto React 19 / TypeScript.
- Delivered the full module set — hotline, broadcast composer, per-org permissions, embedded analytics — with TypeScript and lint errors driven to zero.

Superset Rescue & Account Retention

2-wk rescue • 3-day save

- Took over a six-month-stalled Mode Analytics replacement the infrastructure team couldn't deliver — a **two-week, around-the-clock push with Claude** shipping Apache Superset on **AWS EKS**, wired into the admin dashboard and Rails backend, plus a Claude skill that **autonomously deploys report code** and reconciles git drift — in production today.
- When a communication gap put the next week's QBR at risk, partnered with ServiceMax's **SVP of Engineering** to stand up alternate production environments in **three business days** for side-by-side beta testing — **retaining a national telecom and a global pharma client**.

Zinc E2E Reliability Initiative

Regression 5 days → 2

- Flown to the East Bay for a high-priority reliability push — demoed a working Playwright framework **within one week**, led three engineers across post-deploy smoke and chat regression, and **cut the web regression cycle from 5+ days to 2** — handed off with near-zero oversight.

Platform backbone (2021–present). Five years on Zinc’s Rails backend (~300 PRs): v3 calling for 60K users (Twilio), LLM/ Copilot gateway, analytics, React Native delivery.

INDEPENDENT PRACTICE

Founder & Principal Engineer

WOLFE FAMILY SMALL BUSINESS SOLUTIONS LLC (WFSBS) · 2016 – PRESENT · + J³ ENTERPRISES & KATY CUSTOM WEB SERVICES (2025)

A track record of embedded technical partnership with Bay Area companies since 2016 — WFSBS brought me to San Francisco and carried the 1099 engagements; J³ now houses AI product ventures. Working fluency in PE/VC expectations for growth-stage companies as a product leader.

BizBuzz — AI Newsletter SaaS BizBuzz.app · Live testing

- Built for a real customer problem — a real-estate broker needed multiple monthly newsletters from real-time sources she couldn’t curate manually; a **LangGraph agent now writes them, with a human in the loop.**
- Live at BizBuzz.app, in testing with several prospects: GraphQL / Prisma / Postgres, cost-capped scheduled jobs, live Stripe billing, Kubernetes.

Co-Pals — AI Team-Knowledge Platform ~171K SLOC · solo

- Designed and built solo: **RAG semantic search** (ChromaDB embeddings), an **MCP server**, Slack and Teams integrations, an embeddable chat widget, a 70-model data layer behind ~175 API routes, and an AWS-CDK-to-Kubernetes migration.

Allwin Windows — Digital Transformation Embedded partner

- End-to-end technical partner for a Houston installer: SEO/AEO marketing platform on a Cloudflare edge pipeline, a **multi-persona AI agent stack** via OpenClaw, and a Google Workspace migration.

MCP across the stack. Built Model Context Protocol servers in three separate systems and shipped ~308K SLOC solo across 10 production codebases in the practice.

EARLIER EXPERIENCE

- | | |
|---------|---|
| 2021 | Pattern — Senior Back-End Engineer (via WFSBS): greenfield Rails product-catalog API. · DispatchBot — Director of Software Development: split out the core revenue system for reliability; led a team of two. |
| 2020 | Hello Alice — Tech Lead (via WFSBS): hardened the product through hypergrowth; owned DevOps; mentored senior engineers. · Hotel Engine — Senior Engineer. |
| 2019–20 | Coupa Software — Senior Engineer on the procurement app responsible for 70% of revenue; redesigned bug-lifecycle workflow. |
| 2016–19 | Shop-Ware — Senior Engineer (via WFSBS, San Francisco): 30% product-ownership share of the flagship SaaS; ran production for two years. |
| 2012–16 | Accelerate Learning · Erdos Miller · Iberon — edtech across all 50 states; led a 5-engineer team on real-time oil-drilling monitoring and sold \$1.5M in add-on software via weekly on-site client work. |

SKILLS

- AI Engineering**
Agentic development (Claude Code, OpenSpec, skills), RAG & embeddings (ChromaDB), LangGraph, MCP servers & clients, LLM gateway integration
- Languages & Frameworks**
TypeScript, Ruby on Rails, JavaScript, SQL · React 19, React Native, Next.js 15, Node.js, GraphQL, Prisma
- Cloud & DevOps**
AWS (EKS, ECS, S3, CloudFront, CodePipeline), Kubernetes, Docker, Jenkins, GitHub Actions, Cloudflare, Sentry, OAuth / SSO

EDUCATION

- MBA, IT Management**
Western Governors University · 2020
- BA, Computer Science** (Math minor)
Southwestern University · 2012

QUALITY

Playwright E2E · TDD / BDD · RSpec · Vitest
